Example

Better than problem 5.13!

Predict (draw) the ${}^1\!H$ NMR spectrum for $\frac{\delta}{\delta}$. First list (the calculated) δ , multiplicity and integration.

Example

Better than problem 5.13!

Predict (draw) the ¹H NMR spectrum for First list (the calculated) δ , multiplicity and integration.

$$CH_3$$
 s, 3 H: δ = 0.23 + 0 + 1.55 = 1.78 ppm

CH₃ s, 3 H:
$$\delta$$
 = 0.23 + 0 + 1.55 = 1.78 ppm
CH₂ q, 2 H: δ = 0.23 + 3.13 + 0.47 = 3.83 ppm

 CH_3 +, 3 H: $\delta = 0.23 + 0.47^{?} + 0 = 0.70$ ppm, probably too small

A drawing such as this is accurate enough:
