

What is the difference between these two questions:

- Will it rain tomorrow?
- What is the probability that it will rain tomorrow?

Key concepts underlying statistics and statistical thinking

- **Decision** (e.g., based on probability of raining).
- **Uncertainty** (unpredictability).
- **Risk of being wrong** (error).
- **Variability** - Answer (estimates of the probability of raining) may change with more data (preferably towards more accurate answers, i.e., probabilities).
- **Accuracy** (close to reality, i.e., yes/no rain; models predicts correctly).
- **Knowledge** (accumulation of evidence, i.e., that the model that we used to predict rain becomes more and more accurate).

Statistics is the science of
assisting in decision making
with incomplete knowledge
(or without complete knowledge)

Statistics is key in decision-making processes because most decisions are made without complete knowledge (i.e., decisions always carry some level of uncertainty).

“Statistics” as defined by the American Statistical Association (ASA) “is the science of learning from data, and of measuring, controlling and **communicating uncertainty.**”

Welcome to BIOL 322

Statistics for Biological Sciences
(BioStatistics)

Pedro Peres-Neto, PhD

Professor, Department of Biology,
Concordia University

& Canada Research Chair

Don't hesitate to raise your hand during lectures if you have any questions.

I'm also used to "read rooms" to see when students have questions.

Statistics is key!

“Statistical thinking will one day be as necessary for efficient citizenship as the ability to read and write”

- Herbert George Wells

Statistics is key!

*“Mathematics may rule the universe,
but statistics rule societies”*

- An inspiring moment during a BIOL322 lecture in 2018

What is a statistical question?

- ✓ What is the average size of Canadians?
- ✓ Is 10 a number?

What is the difference between these two types of questions?

What is a statistical question?

- ✓ What is the average size of Canadians?
- ✓ Is 10 a number?

More information (data) changes (hopefully improving) the answer; i.e., one requires statistics and the other doesn't.

Do we need statistics to calculate the number of female candidates in an election?

Do we need statistics to calculate the number of female candidates?

The image shows a screenshot of a news article from Global News. The article is titled "Women make up 31% of candidates in Quebec municipal elections" and is written by Raquel Fletcher, a Quebec City Correspondent for Global News. The article is dated October 16, 2017, at 6:26 pm, and was updated on October 18, 2017, at 11:35 am. The article is categorized under "POLITICS". The page also features a navigation bar with "National" and "TV News Programs" options, and a weather widget for Montreal showing a temperature of 26°C. The article content is partially visible, showing the title and author information.

NO! This question would be answered by simply counting the number of female candidates over the total number of candidates. This question is not answered by collecting more data that may change the results.

NO! This question would be answered by simply counting the number of female candidates over the total number of candidates. This question is not answered by collecting more data that could **change the results**.

We should become comfortable with the idea that the most interesting and useful results may change if new information (data) is gathered

Statistics: “the science of assisting in decision making with incomplete knowledge”

Which one is a statistical question?

- How many students checked or used their cell phones during any class across Montreal universities?
- Have you checked your cell phone at the end of today's class?

Welcome to BIOL 322 (some initial thoughts on learning/teaching philosophy)

Learning is not a spectator sport. We do not learn much just sitting in classes listening to instructors & memorizing pre-packaged assignments.

We must talk about what we are learning, write about it, relate it to past experiences, and apply it to our daily lives. We must make what we learn part of ourselves.

- *Chickering and Gamson*

Statistics is a science in its own!

“Statistics is a science, not a branch of mathematics, but uses mathematical models as essential tools.”

- John Tukey

Statistics is a Mathematical Science

(not a branch of Mathematics)

- We use the singular *is* and not the plural *are* to emphasize that statistics is a field of study, not just a “bunch” of methods.
- We use *mathematical* as an adjective because although statistics certainly makes use of much mathematics (another discipline), it is a separate discipline and not a branch of mathematics.
- We use the noun *science* because statistics is the science of gaining insight from data.

- From “Some Important Comparisons between Statistics and Mathematics, and Why Teachers Should Care” by Rossman, Chance, and Medina (2006).

Statistics is NOT a Branch of Mathematics

The book *A History of Mathematics* is the classic one-volume history of mathematics.

Statistics is not mentioned in the comprehensive index.

Statistical Thinking *versus* Mathematical Thinking

Mathematics is, by and large, a ***deterministic*** way of thinking and the way mathematics is taught in schools entrenches students into a deterministic way of viewing the quantitative world around them - *What is the size of our planet?*

Statistics is, by and large, a ***probabilistic*** or stochastic way of thinking (i.e., it considers uncertainty) - *What is the probability that it will rain tomorrow?*

Statistical Thinking *versus* Mathematical Thinking

Statistics is a separate discipline with its own unique ways of thinking and its own tools for approaching problems.

- J. Michael Shaughnessy, "Research on Students' Understanding of Some Big Concepts in Statistics" (2006)

Let's take a small break – 2 minutes

Statistics *versus* Data Science

(demystifying a trend)

“For statisticians, the entire data science trend seems a bit patronizing. No matter what your exact definition of data science is, it’s going to sound pretty similar to the work that statisticians have been doing for decades.”

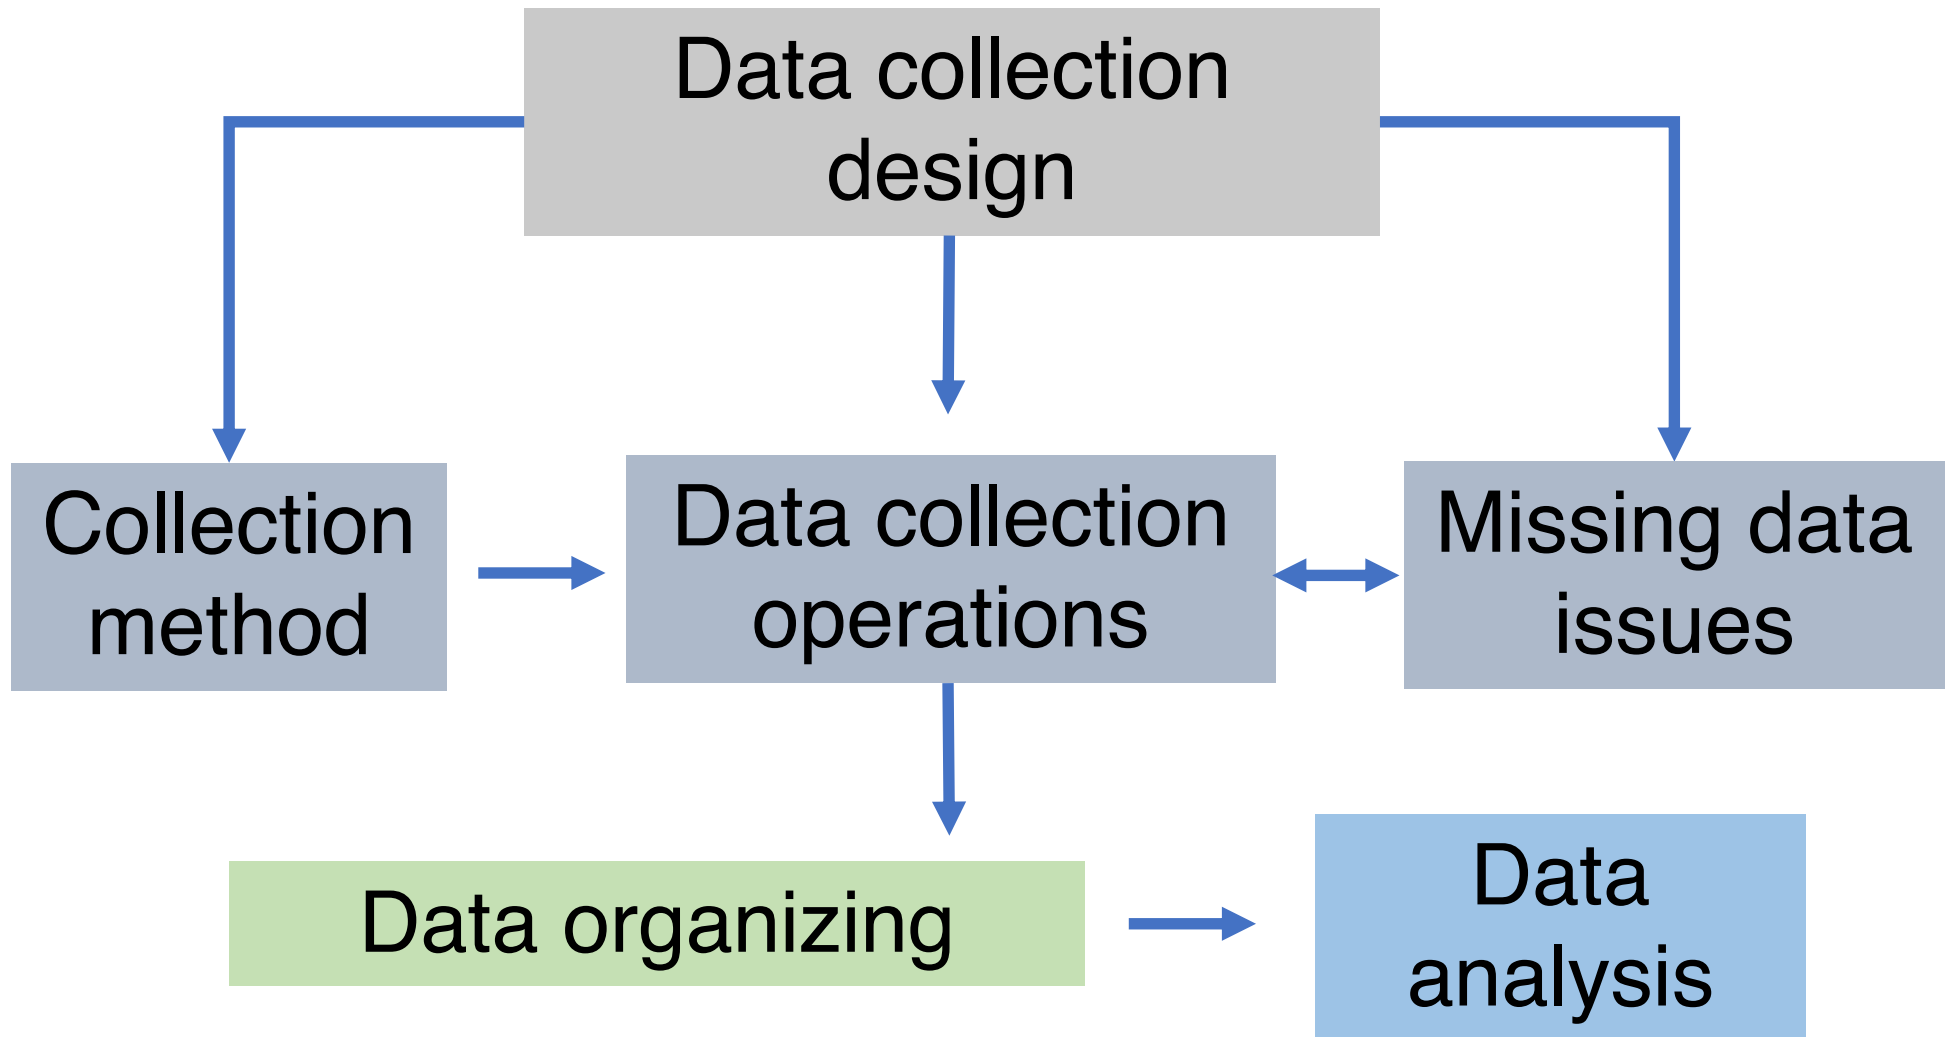

- Nate Silver

Roles of statistics

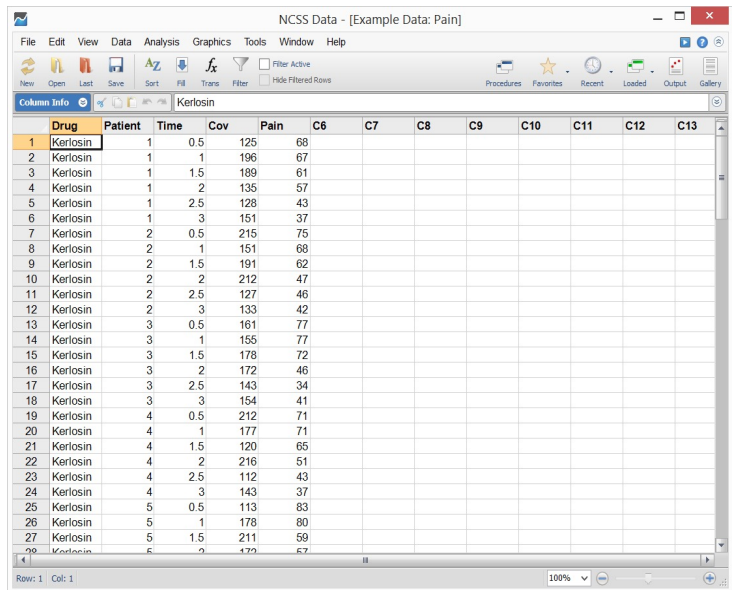

Statistics is a discipline that:

- 1) Designs data collection protocols (observational and experimental).
- 2) Summarizes information to aid understanding.
- 3) Draws conclusions from data.
- 4) Communicate uncertainty.
- 5) Estimates the present or predict the future.

Roles of statistics: [1] - Design data collection and protocols (experimental and observational)

Roles of statistics: [2] - Summarize information to aid understanding

The screenshot shows a software window titled "NCCS Data - [Example Data: Pain]". The window contains a table with the following columns: Drug, Patient, Time, Cov, Pain, C6, C7, C8, C9, C10, C11, C12, and C13. The data is as follows:

Drug	Patient	Time	Cov	Pain	C6	C7	C8	C9	C10	C11	C12	C13
Kerlosin	1	0.5	125	68								
Kerlosin	1	1	196	67								
Kerlosin	1	1.5	189	61								
Kerlosin	1	2	135	57								
Kerlosin	1	2.5	128	43								
Kerlosin	1	3	151	37								
Kerlosin	2	0.5	215	75								
Kerlosin	2	1	151	68								
Kerlosin	2	1.5	191	62								
Kerlosin	2	2	212	47								
Kerlosin	2	2.5	127	46								
Kerlosin	2	3	133	42								
Kerlosin	3	0.5	161	77								
Kerlosin	3	1	155	77								
Kerlosin	3	1.5	178	72								
Kerlosin	3	2	172	46								
Kerlosin	3	2.5	143	34								
Kerlosin	3	3	154	41								
Kerlosin	4	0.5	212	71								
Kerlosin	4	1	177	71								
Kerlosin	4	1.5	120	65								
Kerlosin	4	2	216	51								
Kerlosin	4	2.5	112	43								
Kerlosin	4	3	143	37								
Kerlosin	5	0.5	113	83								
Kerlosin	5	1	178	80								
Kerlosin	5	1.5	211	59								
Kerlosin	6	2	170	67								

From raw (primary) data.....to summaries

Roles of statistics: [3] & [4] - Draw conclusions from data & communicate uncertainty (estimate error)

Example: Voting polls in the news which make a claim about precision; example:

“43% of the voting intention goes to the XXX party. The sample size was 1020; for a sample of this size the maximum margin of error is about 3%.”

Do you know what that means?

Roles of statistics: [3] & [4] - Draw conclusions from data & communicate uncertainty (estimate error)

Example: Voting polls in the news which make a claim about precision; example:

“43% of the voting intention goes to the XXX party. The sample size was 1020; for a sample of this size the maximum margin of error is about 3%.”

Do you know what that means? (“we're pretty sure the true value regarding voting intention for party XXX in the population is $43 \pm 3\%$, or somewhere between 40% and 46%”)

Roles of statistics: [5] - Estimate the present or predict the future

FIRST WARN WEATHER WHAT A 20% CHANCE OF RAIN REALLY MEANS

**WHY IS IT RAINING?
IT'S ONLY A 20% CHANCE.
THEY ARE NEVER RIGHT!**

**WHY ISN'T IT RAINING?
THEY SAID A CHANCE OF RAIN.
THEY ARE NEVER RIGHT!**

The infographic features ten cartoon characters standing in a row. The first two characters have rain clouds with rain falling below them. The remaining eight characters have sun behind clouds below them. A bracket above the first two characters points to the text 'WHY IS IT RAINING? IT'S ONLY A 20% CHANCE. THEY ARE NEVER RIGHT!'. A larger bracket above the remaining eight characters points to the text 'WHY ISN'T IT RAINING? THEY SAID A CHANCE OF RAIN. THEY ARE NEVER RIGHT!'.

- Source: <http://wxbrad.com/why-a-50-chance-of-rain-usually-means-a-100-chance-of-confusion/>

What is the role of statistics? **Convince you and others!**

Statistics is key in decision-making processes because most decisions are made without complete knowledge (i.e., decisions always carry some level of uncertainty).

What is the role of statistics? **Convince you and others!**

HOW TO LIE WITH STATISTICS

(Huff, D. 1954)

There are three kinds of lies: lies, damned lies, and statistics.
—Disraeli

Statistical thinking will one day be as necessary for efficient citizenship as the ability to read and write.
—H. G. Wells

It ain't so much the things we don't know that get us in trouble.
It's the things we know that ain't so.
—Artemus Ward

Round numbers are always false.
—Samuel Johnson

I have a great subject [statistics] to write upon, but feel keenly my literary incapacity to make it easily intelligible without sacrificing accuracy and thoroughness.
—Sir Francis Galton

We often make decisions based on wrong guesses!

Out of 100 eligible voters How many do you think voted in the last election?

GUARDIAN GRAPHIC

Published in Oct. 2014

We often make decisions based on wrong guesses!

Probabilistic thinking is not always intuitive

The Monty Hall Problem
(from “Let’s make a deal”):
In search of a new car, you pick a door, say 1. The game host then opens one of the other doors, say 2, to reveal a goat and offers to let you pick door 3 instead of door 1 if you want to. **Would you switch to door 3 or keep door 1?**

Biostatistics is the branch of statistics that study data related to living organisms

Biostatistics is an extremely active field of statistics

Let's take a small break – 2 minutes

The fear of statistics (bio or not)

The fear of statistics

Bottom line:

There is fear of statistics...but *there is no need to!*

The challenges in understanding numbers and numerical thinking

“Mathematics (and statistics) is not primarily a matter of plugging numbers into formulas and performing rote computations.

It is a way of questioning and thinking that may be unfamiliar to many of us, but is available to almost all of us.”

- John Allen Paulos, A Mathematician Reads the Newspaper.

The challenges in understanding statistics

Let me describe my goal & teaching philosophy
with a single problem: “Pretend that you need to learn
a new number system”

This message brought to you by every instructor that ever lived.

WWW.PHDCOMICS.COM

But if it's not in there...let me know

Please use our Moodle FORUM to ask questions: the answer to your question can help everyone!

We should all be cordial

Instructors enjoy to be greeted cordially; for example:

Hello Pedro

Hello Dr. Peres-Neto; or Hello Prof. Peres-Neto

Hello could be replaced by Hi or Dear depending on the occasion.

Try to avoid being impersonal:

Hello,

Hi,

Hello sir/Hi sir - “If you forgot your instructor’s name, then please look over the course syllabus.”

Thank you 😊

Next class - Sampling

We biologists are relatively small
